Dear Hiring Manager,

With over a decade of experience leading complex technical projects in IT, biotech, and startup environments, I bring a unique blend of strategic planning, cross-functional leadership, and Agile execution. I am confident in my ability to drive high-impact initiatives from concept through delivery while aligning closely with business goals and customer needs.

In my most recent role at Isos Technology, I led full lifecycle project delivery for enterprise IT clients, managing Atlassian-related migrations and service implementations. I drove all aspects of project execution, balancing budgets, schedules, and scope, while serving as a key liaison between engineers and stakeholders. Prior to that, at Clip Health, a diagnostic startup, I oversaw multiple R&D and regulatory projects involving both software and hardware components. I played a central role in obtaining FDA Emergency Use Authorization for a COVID-19 test, coordinating deliverables across engineering, QA, regulatory, and supply chain teams.

I hold certifications including PMP, PMI-ACP, Certified Scrum Master (CSM), and Salesforce Admin, reflecting my commitment to continuous growth and process excellence. I've successfully led both Agile and Waterfall projects, introduced scalable workflows, and coached teams through organizational change, always with a focus on quality, transparency, and measurable outcomes.

I thrive in dynamic, collaborative environments and enjoy tackling complex challenges that require both strategic vision and hands-on execution. I would welcome the opportunity to bring this mindset, and my experience, to your team.

Thank you for considering my application. I would be excited to connect further and explore how I can contribute to your upcoming initiatives.

Warm regards,

Melanie Wilson
