Experience

Software engineer

Meta (formerly Facebook), London, UK

Oct 2022 – present

- Removed backend step from Facebook messaging's web auto-restore process that retrieves message history, monitored experiment until full launch, and published readout that confirms:
 - 91% reduction in overprompting (issue where user gets prompted to create a PIN for their encrypted backup repeatedly in a very short span of time, resulting in a flicker in the UI)
 - 18% message history restore latency
 - \$3k+ capacity cost savings.

Technologies: React, PHP/Hack

- Created web UI components on Facebook messaging and Messenger, E2E tests, and logs in feature that affects over 300 million threads, increasing end-to-end encryption adoption by 1.43% to 98%.

Technologies: React, PHP/Hack, Figma

- Led project to implement a new mobile design system for the Avatar Editor:
 - Managed public rollout successfully to over 1.30 billion users worldwide
 - Zero reported issues with 27 new UI components and 127 screenshot tests
 - Guided other teams' engineers to integrate new components into their own features.

Technologies: PHP/Hack, Figma

- Revamped WhatsApp support ticketing system on both UI and infra sides by introducing automatic execution of automations in a pre-ordered list (automations are automatic actions performed on a ticket depending on the ticket's categorisation) leading to a reduction of over 30% in automated ticket resolution time for over 4 million tickets every day

Technologies: Python, PHP/Hack, C++, React

- Led a team of 5 to develop a new avenue for customers to make in-product purchases - in charge of overseeing planning, privacy review, content design, UI/UX design, and executed a full-stack solution including integration of customer data with third-party CRM software.

Technologies: React, GraphQL, PHP/Hack, Figma, CRM (customer relationship management)

- Made client-facing notices, including both UI implementation and server data retrieval, and created corresponding E2E tests in a project forecasted to cut revenue losses by over \$200k a year.

Technologies: React, GraphQL, PHP/Hack, Jest E2E, Figma, Mercurial

- Cut the time taken to fix problems related to a new media calling framework by 50% by retrieving and displaying crucial call metadata in a debugging tool, plus built accompanying unit tests.

Technologies: JavaScript, PHP/Hack, Mercurial

Computer Application Services, Edinburgh, UK

Jul – Sep 2020

- Optimised performance and speed of customer data-tracking service (from over 1 minute to under 7 seconds for data to be displayed) by changing how database information is queried
- Analysed and visualised clients' data with 3 filters using API calls.

Technologies: ASP.NET MVC, C#, HTML, Sass, jQuery, SQL Server Management Studio.

Education

Heriot-Watt University, Edinburgh, UK

Sep 2018 – May 2022

BSc (Hons) in Mathematical Physics (First Class)

Awards:

- Deputy Principals Award (for 3 years running) in recognition of academic excellence
- Neil Forbes/Scottish Enterprise Prize for the most outstanding final year BSc project.

Projects

- Built a containerized web app from scratch that allows users to browse through a collection of books and keep track of their reading progress by making digital bookmarks associated with their personal account (data security considerations: password hashing and encryption).

Technologies: Docker, React, SQLite, Sequelize, Rest API, bcrypt, JWT (JSON Web Token), Git

- Established database connections, created UI components, and implemented endpoints for a web app that tracks recurring subscriptions and free trials in a 5-person team.

Technologies: HTML, CSS, JavaScript, Node.js, SQLite, Sequelize, Git.
