IMMIGRATION STATUS: GREEN CARD

PROFESSIONAL SUMMARY: Experienced in designing and scaling cloud-native applications across AI, fintech, and SaaS domains. Known for building reliable systems, improving performance, and leading cross-functional initiatives that align engineering decisions with business goals. Passionate about architecture, technical mentorship, and fostering engineering excellence on the path toward broader technology leadership.

WORK EXPERIENCE

Pearl AI (Full time) September 2025 - Present Designation: Senior Software Engineer

- Leading full-stack development of authentication and reliability features, including Multi-Factor Authentication (MFA).
- Collaborating with product and infrastructure teams to resolve high-impact customer issues across frontend and backend systems.
- Improving observability, deployment processes, and code quality to enhance platform stability in a fast-growing environment.
- **Tech Stack:** React, TypeScript, REST, PostgreSQL, AWS, Git, Cursor

Rainbow Insurance (Full time) September 2024 - February 2025 Designation: Software Engineer

- Worked as a Full Stack Software Engineer in a small Series A startup
- Worked on improving the performance of the application: There was an issue with page load times and I worked on identifying the root cause for it. Used a CPU profiler to identify the bottlenecks and determine there were certain instances where multiple calls were being made to the backend which had to be refactored.
- Championed engineering best practices in observability and automation, influencing roadmap for system reliability.
- Building out new features, working on performance improvements and enhancements to existing applications : Code modularization, refactoring
- Tech stack: React, TypeScript, Go, GraphQL, Postgres(NoSQL), AWS, Git, CI/CD, Cursor, Datadog, QA Automation

Intuit (Full-time) 19th Jan 2021 - Feb 2023 Designation: Senior Software Engineer

- Worked as part of the Growth team developing the A/B testing platform
- Designed and launched feature-flag infrastructure for experimentation, now used company-wide.
- Drove performance and scalability initiatives across multiple services, collaborating with 6+ teams to improve platform uptime and latency.
- Owned a microservice and involved in all aspects of efficient functioning of the service from performance, integration, availability, and infrastructural updates in AWS to ensure smooth operation. Third party integrations to enable user agent parsing in Java and JavaScript. Splunk log analysis, dashboard creation to determine health of service and identify pain points. Part of the support rotation and helped answer customer questions, debug and resolve incidents for any of our services.(24/7)Also worked on the UI Console for setting up the experiments. GDPR - services in place for data deletion based on customer requests. Data collected at Intuit is based on user preferences. Updated services that ensure smooth operation of those services and maintenance of SLAs.
- Worked full stack on the JavaScript SDK that helps teams integrate with the experimentation platform to run A/B tests. This is built in Nodejs.
- Working on the Java Microservices for resilience and performance tuning.
- Tech stack: JavaScript, Nodejs, React, Git, Jest, Java, Kotlin, AWS, Python, CI/CD, QA Automation

Apex Systems @Intuit (Contract) 20th May 2019 – 2nd October 2020 Designation: Java Developer II

- Worked as part of the team that develops the Marketing and Advertising Platform for the Consumer Group

- Worked on the MVP for the Insights Portal doing both backend and front-end work. Worked full stack developing tools to configure the marketing offerings and the backend for both launching the offers and allowing configuration.
- Successfully led and completed the migration of a legacy application (Ad Ops Console) to plugin-cli with a React upgrade.
- Tech stack: Java, Kotlin, Spring Boot, REST, React, AWS, Git, MySQL, Python, QA Automation

BayArea Techworkers @ Google 29th May 2018 – 17th May 2019 Designation: Cloud AI Developer_node.js

- Worked as part of the team the develops sample applications using AI and ML APIs on the Google Cloud Platform (GCP)
- Contributed to an open source project. Wrote sample applications in JavaScript(Nodejs) and Java to interact with Google's AI and ML APIs. Built chatbot prototypes using company documents provided for Paypal and eBay.
- Tech stack: Java, Nodejs, REST, Maven, Git and the Google Cloud Platform

Benetech, Palo Alto 24th August 2015 – 12th June 2017 Designation: Web Developer

- Developed features for web applications and created new POCs. Incorporated web accessibility guidelines while developing applications
- Owned and was wholly responsible multiple applications given the small team size (12 members in the Engineering team)
- Tech stack: Node.js, REST, Backbone.js, Bootstrap, HTML, CSS, Java, Selenium, Jenkins, Git

Prior Experience:

- **Dell Inc., Santa Clara, CA – Software Intern**
Developed analytical tools for Cloud Connect Android devices using Java and Ruby.
- **CGI Information Systems, India – Senior Software Engineer**
Built and enhanced enterprise ticketing and workflow systems.
- **IBM India Pvt. Ltd. – Application Developer**
Developed customized, service-oriented ticketing applications using Java and C++.

EDUCATION

Master's in Engineering (with concentration on Software Engineering) San Jose State University, San Jose CA, May-2015
GPA: 3.80/4.0

Bachelor of Engineering in Electronics and Communication, Visveswaraiah Technological University, B.M.S. Institute of Technology, Karnataka, India

TECHNICAL SKILLS

Languages: JavaScript, Java

Database: SQL, MySQL, NoSQL

Operating Systems: Linux, Windows

Development Tools: Eclipse, IntelliJ, Git, VSS, Maven, Docker, Vagrant, AWS, GCP

Web: React, Node.js, Bootstrap, JSON, XML, REST, SOAP, GraphQL, Python (Working knowledge), HTML, CSS, jQuery, Ajax

Others: Cucumber, working knowledge of R
