SUMMARY

Seasoned cloud solutions architect with experience in enterprise-level migrations to AWS Developer/Admin with 7+ years of experience in overall cloud development, cloud migration, and implementation of various cloud management products and services. Cloud engineer with experience in cloud administration, user management, open-source software installation and configuration, operating system, application hardening, and change management. Strong skills in providing operations and maintenance support for AWS cloud resources, which includes launching, maintaining, and troubleshooting EC2 instances, S3 buckets, Virtual Private Clouds (VPC), Elastic Load Balancers (ELB), Relational Database Services (RDS), backups, automation via Puppet, code deployment via git, configuration, maintenance, monitoring via CloudWatch, CloudTrail, New Relic and Nagios. Proven ability to lead teams in the design, development, and deployment of scalable cloud architectures.

SKILLS

Industry Knowledge: Cloud Computing, Linux, Amazon Web Services, Microsoft Azure, OpenStack, DevOps, Big Data, Amazon VPC, AWS Cloud Formation, Amazon S3, EC2, IAM, RDS, SQS, SNS, ElastiCache, Glacier, SES, SQS, VPC, AWS, Redshift, CloudWatch, CloudFormation, Elastic Beanstalk, Lambda, DynamoDB, SimpleDB, DynamoDB, AWS Snowball, Amazon EMR, Amazon CloudWatch, Amazon Simple Notification Service, AWS Lambda,

Soft Skills: Problem-Solving, Critical Thinking, Teamwork, Leadership, Communication.

TECHNICAL SKILLS

AWS services: EC2, Elastic Beanstalk, EFS,VPC ,RDS, S3,Glacier,IAM,Kinesis, Cloud Front, Cloud Watch, Cloud Trail, Cloud Formation, DynamoDB, Lambda, Route53, SNS, SQS,AP Gateway, Code Pipeline, Code Build Elastic Search, Code Deploy etc. Configuration Management: Chef, Ansible, Terraform, Puppet, Git, Jenkins Languages: Java, Python
Operating System: Windows, Linux, Unix Ubuntu and Solaris.
Databases: SQL Server, Oracle, MySQL

PROFESSIONALEXPERIENCE

AWS Cloud Engineer | Ruvost Solutions – Dallas, TX

Sept 2021 – Present

Responsibilities:

- Led the design and implementation of AWS solutions for clients in various industries including healthcare, manufacturing, financial services, retail, and media & entertainment.
- Developed technical architecture roadmaps to support business requirements and objectives while considering current infrastructure capabilities and limitations.
- Provided guidance on best practices related to security, compliance, performance optimization, etc., as well as identifying opportunities for cost savings or process improvement.
- Assisted with the development of project plans that include timelines, resource estimates, dependencies, risks/contingencies, etc., which are reviewed by senior leadership prior to execution.
- Participated in sales meetings with prospective clients to discuss customer needs and provide recommendations regarding technology solutions that meet those needs within budget constraints.
- Led the migration of ~200 on-premise servers to AWS, including server configuration and application deployment
- Created a cloud-based system for tracking employee training records that reduced manual work by 80%
- Reduced monthly hosting costs by 40% through automation and improved resource utilization
- Developed an automated monitoring system using Amazon CloudWatch that increased uptime from 99% to 100%
- Designed a multi-region disaster recovery plan with cross-account access points (IAM)

AWS Cloud Engineer | Billant Solution – Plano, TX

May 2019 – Aug 2021

Responsibilities:

- Assisted with monitoring AWS services and resources using CloudWatch, CloudTrail, AWS Config, and AWS SNS.
- Implemented automation of infrastructure on the AWS Cloud using CloudFormation templates, deployed LAMP web apps on Amazon Linux instances, provisioned EC2 instance, created S3 buckets with bucket policy, build RDS database, DynamoDB tables, and assess applications for exposure and vulnerabilities with Amazon Inspector.
- IAM administration (created users, groups, roles, policies), build VPC with custom Network Access Control List and Security Groups, site deployment on Elastic Beanstalk, S3 static site hosting, launched EC2 instances using Bootstrap. Deployed scalable and highly available sites using Autoscaling group and Application Load Balancer.
- Engineered Continuous Integration (CI), and Continuous Delivery (CD) using Code Pipeline and Code Deploy.
- Python Scripting and Automation: Regular expressions, website crawling, document parsing.
- Platforms: Windows, Linux and MacOS.
- Deployed and monitored, migrated scalable infrastructure on AWS EC2 and S3 buckets. Also worked on AWS Elastic Load Balancer for deploying applications.
- Using AWS Budgets to set custom budgets for tracking costs and usage of resources in an AWS account. Setting up alerts by email when actual or forecasted cost and usage exceed budgeted threshold.
- Hosted several web applications (e.g., a PHP-MySQL demo app) on Amazon's Elastic Compute Cloud (EC2) service to provide secure, resizable compute capacity in the cloud. Also used Amazon's EC2 Auto Scaling to help maintain application availability and to automatically add or remove EC2 instances according to the conditions defined.

Responsibilities:

- Build and improve the reliability and performance of cloud applications and cloud infrastructure deployed on Amazon Web Services
- Create and attach volumes onto EC2 instances and make sure all attached volumes have EBS snapshots initialized
- Create VPCs and attach all applicable components needed to build a fault tolerance and highly available environment
- Apply Auto Scaling and Elastic Load Balancing to create high availability and fault tolerance to EC2 instances
- Install and configure Apache, Nginx, Drupal, and WordPress on Ubuntu and Amazon Linux instances
- Run Infrastructure as code using Terraform for various CSP's and CloudFormation scripts to build AWS Infrastructure and resources
- Install and configure Atlassian products (Jira and Confluence) and LAMP application on EC2 instances and perform various software installations
- Launch and configure local and external database servers on EC2 and RDS instances
- Experience working with tools like Git, Jenkins, Ansible and Jira.
- Provision user accounts using IAM in collaboration with enterprise Active Directory.
- Worked with various scripting language like Python and Bash
- Perform full AMI backups for all provisioned instances for critical workloads
- Manage security keys using AWS KMS to manage cryptographic keys to control user access in a wide range of AWS services
- Perform system monitoring using Nagios, CloudWatch and New Relic
- Participate in change management on JIRA to help track daily work activities
- Deploy code via GIT and worked with the DevOps team to help push codes to GitHub
- Hands on Experience in NoSQL technology like MongoDB (CRUD Ops, Indexing Replication, Aggregation, sharding, various ops manager activity)
- Extensively worked on terraform modules that had version conflicts to utilize cloud formation during terraform deployments to enable more control or missing capabilities.
- Deployed and managed applications running on a mix of Kubernetes and AWS.
- Automated the deployment of cloud servers using Docker, Kubernetes and AWS with the help of python.
- Led a team in Migrating all applications from ECS to EKS
- Write terraform scripts for CloudWatch Alerts. Provisioned the highly available EC2 Instances using Terraform and Ansible Playbooks.

Data Engineer | African Development Bank Group – Abuja, Nigeria

Feb 2014 – Apr 2017

Responsibilities:

- Collaborate with business and technical leadership and analytics to understand data requirements for current and future needs
- Designed and implemented ETL data pipelines for data sourcing from business systems
- Designed and build data model for analyses, reporting and dashboards
- Develop well-organized, insightful dashboards to support strategic business decisions
- Create data structure and ETL process that feeds the Asset Liability Management Solution to build Liquidity Gap Report, Market Value Report, Income Statement, Principal Cash Flow Report
- Optimized queries executed in database systems by improving query plans and considering data partitioning and compression
- Designed, coded, unit test, and deployed data processes for ingestion, transformation and structuring datasets
- Document technical artifacts for developed solutions

Data Engineer | Oando Plc – Lagos, Nigeria

Jan 2013 – Jan 2014

Responsibilities:

- Build distributed, reliable and scalable data pipelines to ingest and process data for batch and real-time analytics.
- Configured and maintained enterprise Hadoop environment.
- Build data APIs for data services to support critical operational and analytical applications
- Developed efficient Hive/Impala scripts with joins on datasets using various techniques.
- Designed distributed algorithms for identifying trends in data and processing them effectively

EDUCATION

B.Sc. in Computer Science

2001

MEMBERSHIP CERTIFICATION

ISACA

CERTIFICATION:

- AWS Certified Solutions Architect – Associate
- AWS Certified Developer – Associate
- AWS Certified SysOps Administrator – Associate
