ABOUT

Senior Forward Deploy Engineer with 9 years of experience delivering scalable distributed systems. Proven track record building software applications and cloud infrastructure. Adept at collaborating across engineering, product and leadership teams to translate business objectives into robust technical solutions.

TECHNICAL SKILLS

Databases: PostgreSQL, MySQL, Dynamodb

Languages: Python, SQL, Bash, FastAPI, Git, Golang, Helm,

Methodologies: Agile (Scrum), Pair Programming, Agile Ceremonies

Infrastructure: Linux, Docker, Terraform, Ansible, Github Actions, Kubernetes

Cloud: Lambda, EC2, SNS, SQS, VPC, S3, EKS, ECS, Aurora, RDS, IAM, ECR, EventBridge

Client Engineering: Time-Management, Demos, Presentations, Documentation, Collaboration, Problem Solving

AI Engineering: MCP (Model Context Protocol), Agentic Workflows, RAG, LLM

PROFESSIONAL EXPERIENCE

Senior Forward Deploy Engineer

December 2023 – Present

Accenture (Consulting)

London, United Kingdom

- Designed and implemented API integrations and event-driven architectures using AWS SNS/SQS, REST APIs, and Python FastAPI, decoupling services, improving system resilience and replacing synchronous call chains that were causing cascading failures under load
- Built MCP-based agentic workflows and AI-assisted operational automation using Python and Bash, eliminating repetitive ticket toil and cutting mean time to resolution on common requests by 35%
- Designed a Governance framework for AWS infrastructure across three environments using Terraform, trading short-term flexibility for long-term auditability, reducing configuration drift by 60% and eliminating untracked manual changes
- Led technical workshops and solution discussions with enterprise clients to define integration requirements, translate technical capabilities into business outcomes, and drive alignment across technical and non-technical stakeholders
- Diagnosed and resolved complex integration issues across cloud and on-premises environments, performing root cause analysis and replicating customer environments to drive resolution, reducing MTTR by 40%
- Collaborated closely with product and engineering teams during client deployments, providing structured feedback that shaped post-deployment roadmap decisions

Software Engineer, AWS

December 2017 – December 2023

Convoy Inc (Freight Unicorn 2017–20) & Fincra (Financial Services 2022–23)

- Owned the deployment and integration of microservices on AWS EKS for high-volume financial transactional workflows, designing for fault isolation and audit compliance using Terraform and IRSA
- Designed and built event-driven messaging using AWS SNS/SQS fanout to decouple services and improve resilience, replacing synchronous call chains that were causing cascading failures under load
- Collaborated with product managers, QA engineers, and infrastructure teams to take services from design to production, maintaining shared ownership of quality and reliability throughout
- Led end-to-end distributed tracing instrumentation for Python FastAPI services on AWS, providing the team's first full-stack visibility into latency bottlenecks across service boundaries
- Drove **CI/CD** pipeline implementation across 3+ projects, reducing deployment lead time by at least 40% and enabling teams to release with confidence multiple times per day
- Defined and delivered a developer self-service portal using Crossplane and Backstage on **Kubernetes**, eliminating a 2-day manual provisioning bottleneck and enabling teams to spin up namespaced environments in under 5 minutes and made a deliberate trade-off to standardise on Crossplane over Terraform modules to keep infrastructure ownership within the platform team

Network Engineer

January 2013 – December 2017

Aviat Networks (Telecommunications)

- Configured and maintained Linux-based network equipment with a focus on uptime and operational stability

- Owned troubleshooting of complex network connectivity issues using SSH, ICMP, TCP/IP, DNS and HTTP, maintaining high availability across critical telecom infrastructure
- Supported a team of 16 engineers remotely to configure and maintain linux servers running network management software using Shell Scripts
- Monitored infrastructure health and led incident triage and escalation, building early habits in structured on-call response

CERTIFICATION

ITIL v5 Certified (Service/Incident Management Certification)

March 2026 – Present

EDUCATION

MSc Artificial Intelligence with Distinction

Heriot-Watt University

September 2020 – September 2021

Edinburgh, United Kingdom
