SUMMARY

Data Analyst / Data Engineer with around 4 years of experience supporting marketing, healthcare, and enterprise analytics across consulting and industry environments. Strong hands-on skills in **SQL, Python (Pandas, NumPy), Adobe Analytics, Adobe Target, AWS (S3, RDS), Snowflake, Tableau, Power BI, and Excel**. Experienced in building and validating **ETL workflows**, performing **data quality and QA/QC checks**, supporting **A/B testing**, and delivering dashboards and reports. Proven ability to work with large datasets, automate manual processes, and translate data into actionable insights through cross-functional collaboration.

PROFESSIONAL EXPERIENCE

Data Analyst | Epsilon

June 2025 – Present

- Supported Adobe **Target A/B testing** including activity setup, execution, **QA validation**, troubleshooting, and post-test results analysis to drive conversion optimization.
- Built and deployed **ETL workflows using SQL, Python automation, and API-based data ingestion**, reducing manual refresh efforts by **38 hours per month**.
- Integrated multi-channel marketing, CRM, and behavioral data into **star-schema data models**, delivering **14 unified datasets** for personalization and segmentation teams.
- Developed and optimized **Tableau and Power BI dashboards** using AWS S3-backed fact tables and refined SQL transformations to support **11 strategic marketing campaigns**.
- Performed **QA on Adobe Analytics tagging implementations**, validating event firing, data accuracy, and assisting with documentation of tagging plans.
- Reviewed campaign KPIs and contributed **data-driven insights and optimization recommendations** for ongoing marketing initiatives.
- Analyzed **campaign KPIs and performance trends**, delivering actionable insights and optimization recommendations to marketing and business stakeholders.
- Delivered recurring performance **reports and dashboards** to marketing stakeholders using **Tableau, Power BI, and Excel** supporting decision-making for active campaigns.

Data Analyst | McKinsey

August 2024 – May 2025

- Automated **data preparation, transformation, and feature engineering workflows** using **Python (Pandas, NumPy) and SQL**, integrating **2M+ healthcare, inventory, and distribution records** for large-scale analytics.
- Designed and implemented **robust data validation and QA/QC frameworks** using Python and SQL, improving reliability across **20+ Snowflake pipelines** and ensuring **HIPAA-compliant, audit-ready outputs**.
- Refined and optimized **data quality pipelines** using **MySQL, Power Query, Python validation scripts, and AWS RDS**, eliminating **recurring data inconsistencies** and improving reliability across **9 downstream analytics processes**.
- Built and maintained **scalable cloud-based analytics workflows** leveraging **AWS S3 and Snowflake**, enabling efficient storage, processing, and analysis of large datasets.
- Conducted exploratory data analysis (**EDA**), **statistical analysis, and trend identification** to translate complex healthcare KPIs into **actionable business and operational insights**.
- Supported **end-to-end analytics delivery**, including data extraction, aggregation, analysis, and creation of **executive-ready reports and presentations** for senior stakeholders.
- Spearheaded development of a **reusable Python–SQL diagnostic toolkit** with optional S3-based inputs, improving analytical consistency across **11 client deliverables** and mentoring **2 junior analysts**.
- Collaborated with cross-functional consulting and analytics teams to enhance **advanced analytics and data science initiatives**, supporting model-ready datasets and improving overall reporting efficiency and data integrity.

Data Analyst | Dell Technologies

May 2020 – July 2022

- Designed and built **scalable data pipelines** using **AWS SNS, SQS, Kinesis, Glue, SQL, and PySpark**, ingesting and processing **20M+ daily events** into a unified **data lake and Amazon Redshift**.
- Developed **robust data models** integrating **7+ supply chain APIs and heterogeneous data sources**, standardizing schemas and event codes to deliver **5× faster query performance**.
- Implemented **cross-account data integrations** using **Amazon Redshift Spectrum, S3, and AWS Lake Formation**, supporting secure and scalable analytics across environments.
- Built and optimized **20+ SQL and Python-based ETL transformations** to process **650M+ records**, reducing data redundancy by **87%** and lowering storage costs by **30%**.
- Automated an end-to-end **job execution and orchestration framework** using **AWS CDK**, enabling repeatable and infrastructure-as-code–driven pipeline deployments.
- Orchestrated **hourly batch and streaming pipelines** using **ECS Fargate, AWS Batch, and DJS scheduling**, consistently processing **650M+ records in under 10 minutes**.

TECHNICAL SKILLS

- **Programming & Scripting:** Python (Pandas, NumPy), SQL (MySQL, SQL Server), VBA
 - **Data Engineering & ETL:** ETL Pipelines, Data Ingestion, Data Transformation, Data Modeling (Star Schema, Snowflake), API Data Extraction, Data Quality Checks, Validation & QA/QC
 - **Data Analysis & Analytics:** Data Mining, Data Cleaning, Reporting Automation, Exploratory Data Analysis (EDA), Data Wrangling, Statistical Analysis, Hypothesis Testing, Regression Analysis
 - **Cloud & Platforms:** AWS S3, AWS RDS, AWS IAM, Snowflake
 - **Business Intelligence & Visualization:** Tableau, Power BI, Excel (Pivot Tables, Power Query, Dashboard Development), KPI Design, Reporting
 - **Digital & Marketing Analytics:** Adobe Analytics, Adobe Target, A/B Testing, Campaign Performance Analysis
 - **Data Management & Governance:** Data Organization, Metadata Management, Data Storage Practices, HIPAA Compliance
 - **Tools & Collaboration:** Git, GitHub, Jira, Confluence, Cross-functional Team Collaboration
-

PROJECTS

Design and Implementation of a Miniature RDBMS

- Designed a lightweight **rdbms** using **relational algebra**, **indexing**, and **query optimization** logic, enabling **crud** support across **4** core operations through a **command-line interface**.
- Implemented **transaction management** and **sql-like parsing** modules using custom algorithms, improving execution flow across **6** internal test queries while exploring key **dbms** internals.

Excel Project: Data Management, Analysis & Visualization

- Performed **data analysis** using **excel** functions such as **autofill**, **autosum**, and **relative referencing**, improving accuracy across **120** structured rows while standardizing numeric fields for clarity.
- Created a **2-d pie chart** and applied **advanced formatting** cell styles, **conditional formatting**, and **cut-and-insert** operations enhancing visualization of **5** key cost components and reorganizing misplaced data effectively.

Business Analytics & Conceptual Design with Tableau and Power BI

- Analyzed **business requirements** to create conceptual designs using **tableau** and **power bi**, producing **8** visualization components that clarified planning and performance insights.
- Delivered **interactive dashboards** through structured **data modeling** and **cleaning** steps, improving visibility for **4** strategic decision scenarios across stakeholder groups.

Database Management Systems Using SQL

- Constructed **relational tables** using **sql ddl** to define **7** entities, improving data storage structure through controlled schema design and **join-ready** relationships.
- Executed **sql queries** for retrieval, **join** operations, and constraint checks, reducing lookup steps across **6** repeated workflows while exploring core **dbms** mechanics.

ChatGPT API Batch Response Automation

- Crafted a **python** script integrating the **chatgpt api** to read **200** excel input rows, generating automated responses and reducing manual processing workload by **40** entries.
- Produced a consolidated **csv** output using structured **data handling** and **api call** logic, improving multi-query response handling across **repeated** tasks.

Maze Pathfinding Using DFS/BFS (Blind Search Algorithms)

- Implemented **dfs** and **bfs** algorithms in **python** using search nodes and cost checks, generating efficient paths across **12** maze layouts while exploring algorithmic behavior.
 - Created tree-expansion logic with controlled state transitions, reducing traversal steps by **30** node checks and improving route evaluation efficiency.
-

EDUCATION

Florida Atlantic University (FAU) | FL
Master of Science in Data Science

August 2022 – May 2024

CMR college of engineering and technology | India
Bachelors of Civil Engineering

August 2017- May 2021
